**DurableAccess™ 200μm**

Bend Insensitive Single-Mode Fiber

DurableAccess™ 200μm bend insensitive single-mode fiber exceeds the requirements of ITU-T G.657.A1 and can fully utilize the 1260-1625nm wavelength band for transmission. It has better bending performance within the bending radius range of 10-15mm. The 200um coating diameter can effectively reduce the size and weight of the optical cable, making it more suitable for miniaturized optical cables and devices. At the same time, it has the same glass outer diameter and precise geometric size control as conventional fibers, ensures low splicing loss and high splicing efficiency, excellent mechanical properties and environmental characteristics ensure stable performance of optical fibers in various usage environments.
