

DurableAccess™ [B3] bend insensitive single-mode fiber exceeds the requirements of ITU-T G.657 and can fully utilize the 1260-1625nm wavelength band for transmission. It has better bending performance within the bending radius range of 5-10mm, and is used for the last one-mile applications such as FTTH. Accurate dimension ensures low splicing loss and high splicing efficiency, excellent mechanical properties and environmental characteristics ensure stable performance of optical fibers in various usage environments.
