## 4. Installation Instructions

### 4.1 Tools

Following tools would be needed for installation, check and replace:

Phillips screwdriver

Allen wrench

Multimeter

Clamp ammeter

MC4 connector wrench

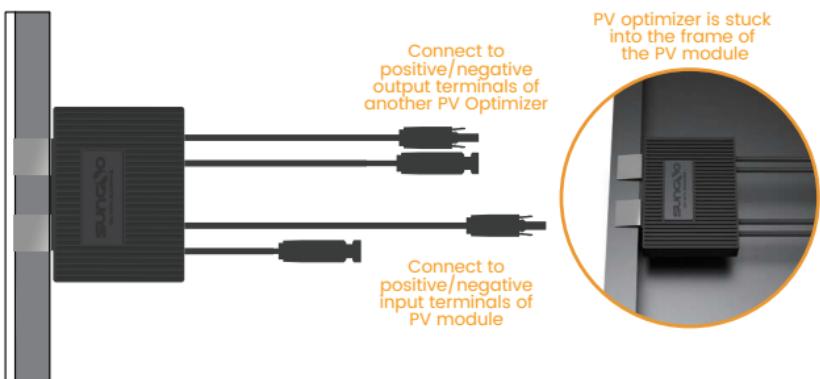

## 4.2 Steps

### Step 1.

Shut down PV inverter, disconnect PV modules from arrays and strings.

### Step 2.

Install PV Optimizer on the frame of PV modules.

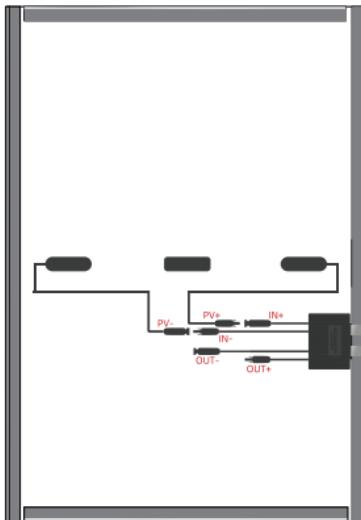

### For clips

Attach PV optimizer to PV module frame, push the clips hardly. If the frame get to the bottom of the clips, installation is accomplished.

### Step 3: Connect input cables

- Connect the positive output (PV+) connector of the PV module to the positive input (IN+) connector of the optimizer.
- Connect the negative output (PV-) connector of the PV module to the negative input (IN-) connector of the optimizer.
- Repeat the above actions to complete the input wire connection for all photovoltaic modules and ensure that the connectors are securely connected.

#### ⚠ Caution!

##### In installation

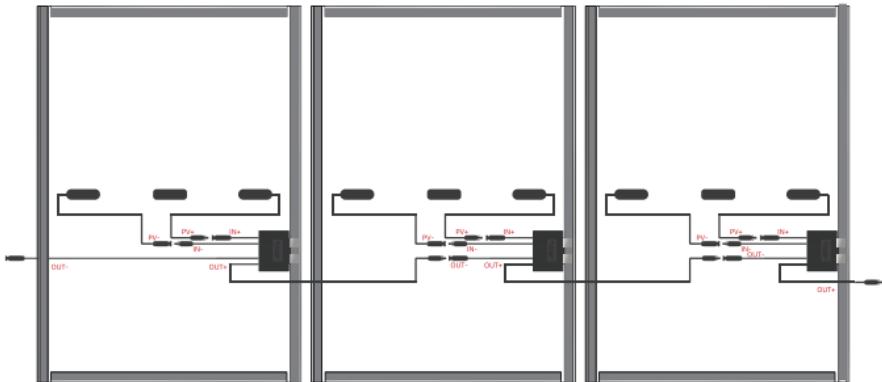

Input cables of PV optimizer MUST be connected first, output cables of PV optimizer should be connected second.

##### In disassembly

Output cables of PV optimizer MUST be disconnected first, input cables of PV optimizer should be disconnected second.

### Step 4: Connect output cables into strings

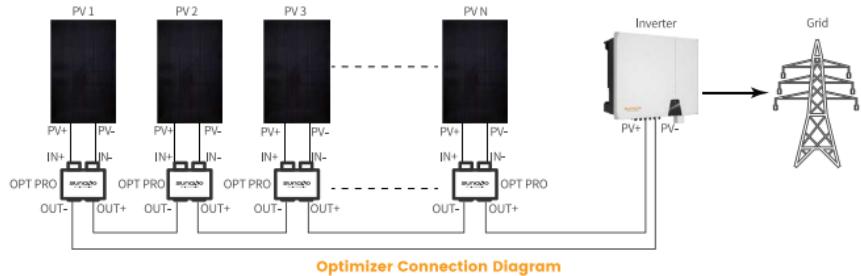

- Connect the positive output (OUT+) connector of the first optimizer in the series to the negative output (OUT-) connector of the second optimizer in the series; Repeat the above actions until the group string connection is complete.

## Step 5: Connect the strings to PV inverter

Connect the (OUT-) of the first optimizer to the (PV-) of the inverter and then connect the (OUT+) of the last optimizer to the (PV+) of the inverter.

The second string repeats the connection of the first string.

## Step 6. Inverter startup

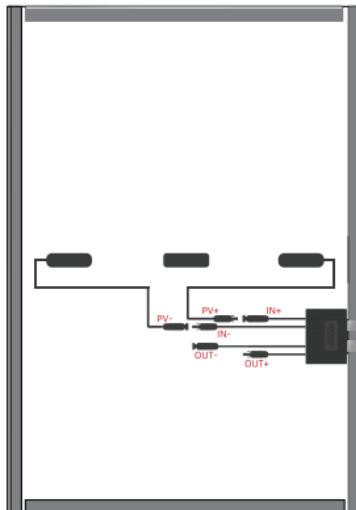

Check all connections of entire system, then turn on PV inverter.

## 5. Detection Method

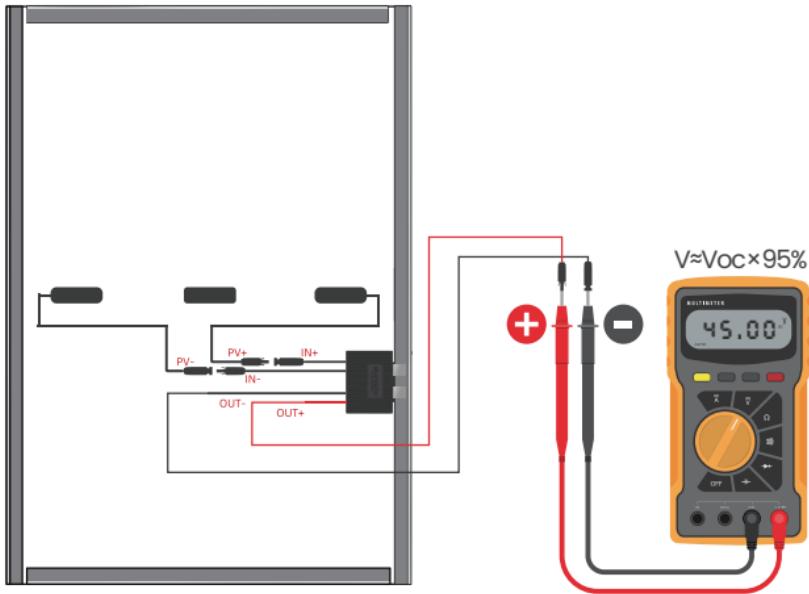

### Notice

**Make sure the optimizer input (IN) and output (OUT) are wired correctly. If the connection is reversed, the device may be damaged.**

Connect the optimizer input (IN) to the pv junction box.

Use the positive pen of the multimeter to connect the positive output of the optimizer, and the negative to connect the negative output , and check the output voltage of a single optimizer.
