

Cassette Steam Sterilizer

Product Characteristics

Convenient

- * 7 inch touch man-machine interface, graphical operation.
- * Equipped with USB interface, realize long-term data storage.
- * New water injection design, improve equipment intelligence.

- * Standard printer, real-time recording of sterilization process parameters.

Compactness

- * Compact patent design, equipment space saving.

Reliable

- * Network communication interface, can access the traceability system.
- * Multi-level permission management to ensure that the sterilization data is true and effective.
- * Split independent control to ensure that each layer runs without interference.

Fast

- * Positive pressure pulsating exhaust sterilization is adopted, and the entire sterilization process only takes 7-10 minutes at the shortest

Application

Fast sterilization of small surgical instruments in stomatology, ophthalmology, operating room, supply room, etc.
