Product Features

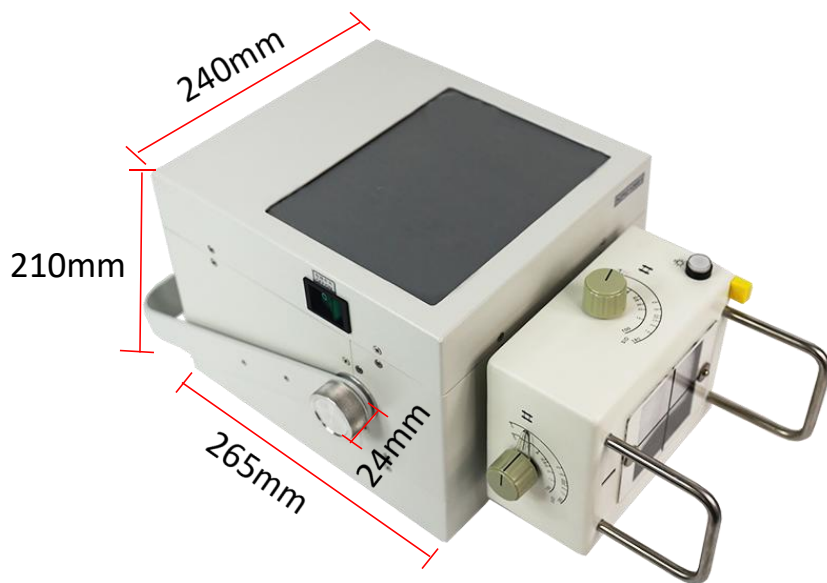

- 1, can be widely used in the examination and diagnosis of human limbs, suitable for hospitals, clinics, physical examination centers, ambulances, disaster relief, first aid and other medical institutions
- 2, simple structure, small size, light weight, not subject to environmental restrictions, no need to establish lead shielding darkroom, easy to carry out work in different areas, can be used for field and special occasions X-ray photography
- 3, optional mobile rack flexible and convenient, can meet different station requirements, can be used as a hospital ward bedside shooting
- 4, with three exposure control methods: remote control, hand brake;
- 5, fault self-protection, self-diagnosis, tube voltage, tube current high-precision control;
- 6, the use of high frequency inverter technology production, stable high voltage output can obtain good image quality
- 7, can be used with DR Flat detector to form DR Digital X-ray photography system.

| Parameter | |
|--------------------------------------------|----------------------------------|
| Output Power | 5kW |
| Rated Voltage | 220~240VAC |
| Dimension | 265mm (L) x240mm (W) x210mm (H) |
| Weight | 15KG |
| Communication interface | RS-232 |
| Technical parameter | |
| Exposure kV range | 40kV-125kV, 1kV step |
| Exposure mA range | 10-100mA |
| Exposure ms range | 1 -4000ms |
| Exposure mAs range | 0.1-200mAs |
| Maximum power | 5.3kW |
| X-ray focus value | Small focus: 0.6; Big focus: 1.8 |
| Max. bulb current of small filament | 20mA |
| Max.bulb current of large filament | 100mA |
| X-ray tube intrinsic filtration | 0.6mmAl |
| Combined head filtration | 1.5mmAl |
