

FULL PRE-PROCESSING SOLUTIONS

ENTER THE GLASS INDUSTRIAL 4.0

Add: No. 7 Tengren Road , NiuLanshan Industrial Zone , Shunyi Distrct , Beijing , P.R.China. Tel: +86-757-25583203 Mob: +86-18610067296 E-mail: sales@macglastech.com / auto@macglastech.com www.macglassglobal.com

About MAC

MAC was built in 2016 as the professional supplier for glass pre-processing solutions and software.

With the fast development of glass processing technology and higher requirement on automation, the labor free glass factory with intelligent system is coming up and will take place of the traditional heavy and dangerous glass processing. It will finally make the glass processing full automation and digitalization.

In 2020, MAC GLASTECH joint with the pioneer and leading manufacturer of the intelligent double edging machinery. This step makes MAC GLASTECH the biggest and strongest supplier for the full automatic preprocessing solutions. Our products are covering from automatic storage system, CNC glass cutting-breaking line, different intelligent edging solutions, CNC processing center, different drilling solutions and washing machines etc.

Except these processing machines, MAC stresses its leading position on the full system automation and integration to MES/ERP. Our customized capacity on automatic storage, auto loading/unloading, sorting system and MACsoft makes glass industrial 4.0 come true.

MAC is always committed to supply the most professional solutions according to different customer situations. Our global service and consultancy system will also make the communication easy and timely.

For all the global glass processors, MAC can accompany and support your development in following fields:

- 1 Full glass pre-processing machinery and solutions with sustainable quality
- Global based service centers guarantee your stable production
- 3 Software integrated for production management, control and monitor

MALE

Glass Online Warehouse

The shuttle storage system includes 1 set or multi sets of shuttle system, guide rail system, glass racks and cutting lines. The shuttle system can automatically supply full pack of glass to the loading table of cutting line. There is a glass feeding entrance for float glass unloaded from truck. The shuttle system will automatically send the glasses to the rack positions that identified by the control system. At the same time, all the raw glass specifications are recorded by scan reader at the entrance. After getting the instruction from the control system or cutting line, the ordered glasses with the rack will be selected and sent to the loading area of cutting line. The whole system is full automatic and digitalized, it is safe and reliable.

Highlights:

- · High productivity and automation
- Space efficiency for more glass storage
- Intelligent data communication with cutting table or ERP
- Safety and labor free of massive glass management and transport

Glass Online Warehouse

Gantry Storage System

The gantry system is suitable to connect 1 to 2 cutting lines at the same time and reach fully automatic operation from storage system to cutting line. The suction cup takes the specified one or two pieces of raw glass from the rack after reading the cutting order and transfers to the cutting machine.

Visible interface on the computer which customer can check the glass details of all racks. For example glass quantity, size, color, supplier, thickness, type of glass. Applicable for cutting processing mixed with various glass sizes.

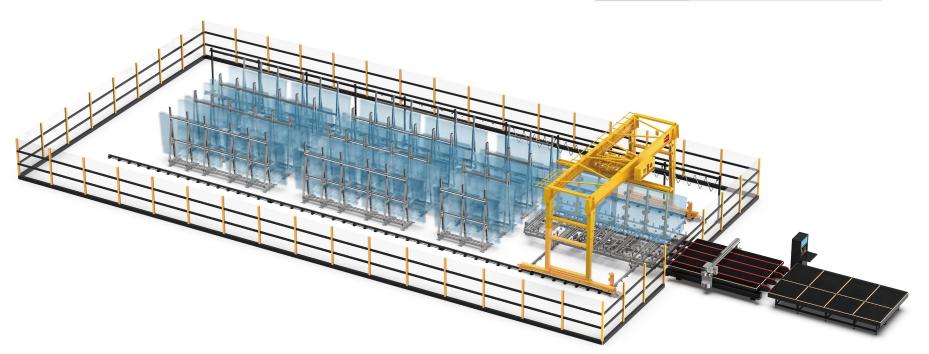

Highlights:

- Fast and flexible for variety of glass production
- Space efficiency
- Intelligent communication with cutting table or ERP
- Safety and labor free system

Technical Data:

GSR series		
Max Glass	2440x3660 mm / 2800x4200 mm / 3300x6100 mm	
Loading	Single / Double Side	
Sucker Weight Capacity	1500-2000 kg	
Transfer Speed	70-100 m/min	

Glass Online Warehouse

Compact Storage System

Fully automatic glass storage loading system is intelligent and combining functions of glass storage and glass loading machine. It transfers raw glass sheet to automatic cutting line through software control.

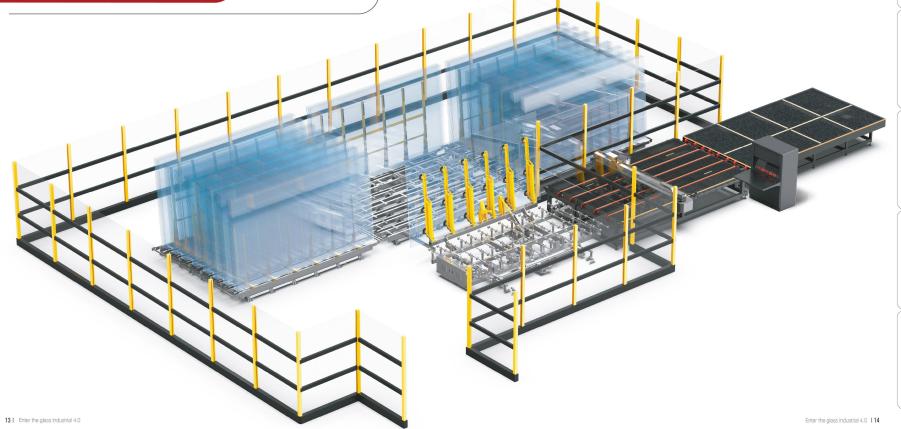

The glass rack system is suitable to connect 1 to 2 cutting lines at the same time to reach fully automatic operation from storage to cutting line. It can connect to the ERP system and read the optimized file from cutting machine. After the system read the cutting file, the specified rack moves to the rail, the loader takes the glass from the rack and transfers to the cutting machine. All glass information can be read and recorded timely during production.

Highlights:

- Easy and compact design
- Space efficiency
- Safety and labor free
- Cost friendly and easy to begin the full automatic warehouse
- Intelligent communication with cutting machine and ERP

Technical Data:

CSR series	CSR2737 / CSR2842	CSR3361
Max Glass	2800x4200 mm	3300x6100 mm
Rack Weight Capacity	6 tons	10 tons
Loader Weight Capacity	1500 kg	2000 kg
Loader Speed	20 m/min	20 m/min

MVE

Automatic Sorting Solutions

To achieve industrial 4.0, the full automatic production chain connection and powerful central integrated control system (MES) are key points. Between different glass processing procedures, the assortment is very necessary to buffer the production speed, adjust the production sequence and match different production to achieve a best productivity.

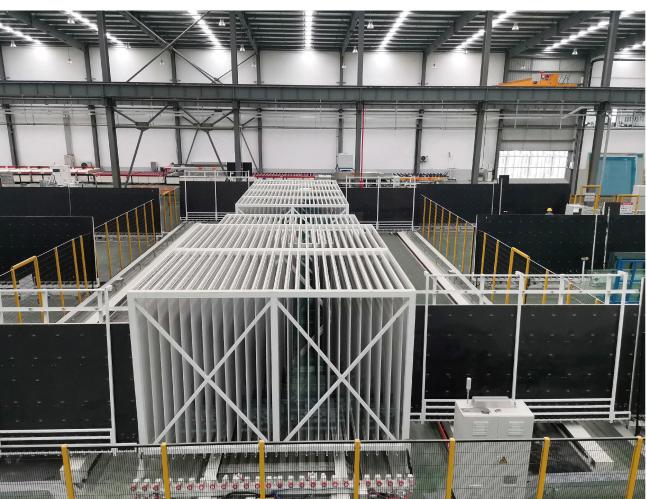

MAC supplys different sorting systems based on our powerful software solutions.

Vertical Sorting System

VSR series assortment with independent glass input/output shuttles records each glass storage ID and working in perfect logics according to MES/ERP system. Glass will be automatically picked and match for different insulating glass production. The whole system is consisting of:

- A. Glass specification detection table/ID reader
- B. Input shuttle
- C. Storage crates according to productivity requirements
- D. Output shuttle
- E. Control system and HMI with software connected to ERP

MAE

Automatic Sorting Solutions

Horizontal Sorting System

HSR series horizontal sorting system is designed on the basis of a powerful and flexible logical programming system. Sorting stacker system includes measuring table/scanline reader, lifting & transfer tables and sorting stacker. The system is widely used between different horizontal processing procedures to achieve full automatic production chain. Link between cutting line-edging, edging-drilling/CNC, edging-tempering furnace etc.

The system comes with Optimize software. It will store the glass according to sizes or customer orders. It can store multiple pieces each layer based on the size of the glass.

MALE

Automatic Loader/Unloader

For different processing, MAC has all automatic loading/unloading machinery. The professional solution with different working cycle time and weight capacity meets all needs to upgrade the processing automation and reduce labor with safety production.

Cutting & Breaking Line

Highlights:

- High speed with superior accuracy and silence
- Intelligent HMI interface and easy operation
- Superior shape glass processing
- Glass scan and parameter automatic reading
- High standard safety design
- Self-designed optimized system
- Excellent Low-E film removing option
- Automatic breaking system at option

The complete set of cutting line works together with storage system for the whole glass processing chain supply. High accuracy, efficiency and stability guaranteed by powerful MACsoft system.

Laser Marker

Identify each glass with laser engraving

The LMT Series Laser Marker is placed between the loader and cutting machine. The laser marking system engraves the marks of glass specifications from ERP with a QR code, logo or other information according to the order requist on each cut glass. The system comes with corresponding recognizer, it can complete the online recognition of the laser code and recognize the processing request while glass is transferred to different processing machines.

The laser marking system is designed for glass ID easy tracking in the whole processing and bear the glass specifications to all the machines in the chain for automatic adjustment and record on the basis of ERP system.

Technical Data:

Description	Parameters
Model No.	PQ6133 / PQ4228
Working Height	850 mm
Weight	1700 kg
Power	4.7 kW
Max. Accelerated Speed	8000 mm/s²
Max.Speed	160 m/min
Max.Size	6100X3300 / 4200X2800 mm
Glass Thickness	2-19 mm
Accuracy	+0.15 mm
Voltage	380/50Hz or Customized
Total Air Consumption	600 L/min
Air Pressure	0.8 Mpa

Expert of Grinding Solutions

Horizontal Seaming Machine

Every architectural glass processor needs a good seaming line:

- High speed arising and bottom grinding
- Strong structure and reliable performance
- Fully Automatic production for various size and thickness
- Easy maintenance and low production co
- Good finishing for tempering
- Labor free and superior Safety
- CNC system and strong software integration
- Low-E film removing function at option

Corner Grinding Machine

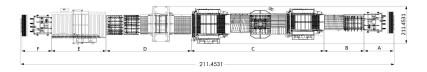

To help you reach perfect grinding finishing, MAC-CG 44 series is the best option. It achieves different corner with arc, shape or straight line distinguish your products from others with totally different finishing.

Highlights:

- CNC control with 4 heads online grinding
- Straight corner grinding processing
- Arc or any shape corner with different radius grinding Free online connection with other processing machinery
- Support USB data input
- Automatic QR code reading and processing (optional)
- MACsoft integration for full line free communication

4-in-1 Processing Center Velocity

MGC Series

MGC Series is one center with 4 independent stations working together with high efficient processing. Its superior velocity and processing precision is perfect for automotive and appliance glass processing.

4 stations can be integrated or stand alone working according to processing requirements.

Application:

- Automotive Glass
- Appliance Glass
- Electronic Glass

Highlights:

- CNC control system with 4 stations working synchronously
- Online connection with other processing freely
- Accurate processing for glass 1-6mm
- Superior Velocity and Precision

Waterjet (Online & Offline)

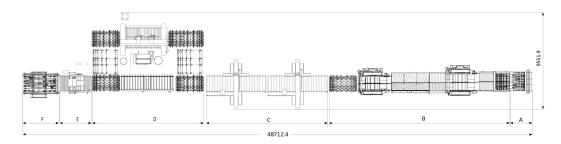

AWJ Series / WJ Series

Highlights:

- Automatic online working with other processing
- Online/offline scanner to read and process
- Superior accuracy and processing capacity
- MAC software support and ERP/MES connection

Application:

- Architectural Glass
- Appliance Glass
- Automotive Glass
- Shower Door

	Model	AWJ2515 / AWJ3020 / AWJ4020	
Cutting Platform Machine Platform	Moving Speed	3-8 m/min	
	Driving Mode	servo	
	Control Accuracy	±0.05 mm	
	Cutting Accuracy	Fixed cutting: ± 0.2 mm Transmission cutting: ± 0.5 mm	
Numerical Control System	Industrial control computer and LCD ar	e adopted	
High Voltage Generator Size: 2130mmx1500mm	Pressurization type	Liquid to liquid (pressurized by water supply of hydraulic system)	
	Maximum displacement of oil pump	80 L/mine	
	Maximum water displacement	3.6 L/min	
	Maximum nozzle diameter	0.33 mm	
	Maximum water pressure	413 Mpa (60000 psi)	
	Normal working pressure	300-340 Mpa	
	Motor power	37kW, 380V / 50Hz (motor brand: Siemens Bede motor)	
	Commutation mode	Electronic commutation	
	Main high-pressure components	The high-pressure assembly is from U.S	

MAC-SD Line: Architectural Glass and Shower Door Processing						
Max processing Size	A/H	В	С	D	Е	F
1500X2000mm	EL2520	LFHSZM20-20	DAS11/D8	AWJ3020	HQX2000	EUL2520
2500X4000mm	EL4025	LFHSZM42-25	DAS11/D8	AWJ4025	HQX2500	EUL4025

Various Washing Solutions

For different glass processing, MAC always has a professional washing machine to enhance your production performance.

HQX Series	Architectural Glass / Appliance Glass / Automotive Glass / Photovoltaic Glass
HQX-T Series	Mirror / Coated Glass / Glass Painting
HQX-E Series	Electronic Glass

Water Treatment WaterTec

WaterTec is specially designed for professional treatment, recycling and environment friendly drainage of the water in wet zone of glass processing factory. It is a customized central treatment system for whole factory solution or compact design for single machine water recycling. The whole system is automatically controlled with PLC system for water recycling, filtering, sludge collection and packing.

WaterTec-S applies the RO technology to achieve a high quality purified water yield perfectly for Low-E glass washing. The system is full automatic PLC control with required water conductivity, PH value monitoring and automatic treatment function. The treated water can reach less than 10µs/cm3.

Description	HQX3300	HQX3000	HQX2500	HQX2000	HQX1700	HQX1300

Software

MAC is not only for the best glass machinery... MACsoft helps you one step forward...

MACsoft is your full life cycle management system PLM+PDM. It is including ERP+ MES+ MCS+ WMS. Wherever internet on, the administration is always running on Cloud for your factory or your group companies worldwide.

Management improvement

MACsoft helps you to build up the scientific management to connect your customer, production, finance, logistics efficiently. Your company will be transparent procedure control with clear date record, communication and analyzation.

Reliable quality Control

Reduce labor involvement in the production and quality control. The uniform quality standard is implemented strictly by machinery and QC scanner online. Reliability is the biggest brand value.

Visible production procedure

Production tracking, monitoring and feedback system to show your production to management and customer timely. All data are automatically collected and scientifically analyzed to help you constantly improve your brand and guide your company development effectively.

More efficient and organized production achieves maximized unit square meter and unit manpower output for a factory.

Saving and safety

Saving on material, labor, space and time by optimized software and logical automatic production. Superior safety is the key points of glass production.

MACsoft is based on deep understanding of more than 1000 different global glass customers. It is practically working for big, medium and even small glass factories development...
