TOS-4N8-01~15-1 1/2H3/2H3

Spring fall lift closed safety valve

Program Highlights

SIZING

Sizing of safety valves in accordance with the leading global standards and codes (Safety valve according to API 526 with standardized capacities, installation dimensions and materials.)

Calculates twophase flow in accordance with API 520 Appendix C and fire case according to API 521

Calculates inlet pressure loss, back pressure, reaction forces, and noise level.

- The solid nozzle screws into the body its maintenance is easy.
- The shape of the disc holder has been designed to enhance the effect of the fluid thrust for an instant lift of the disc.
- Blowdown control is provided with adjustable nozzle ring only.
- The adequate materials and clearance between disc holder and guide, spindle and adjusting screw assures disc to lift successfully.
- The surface of both the disc and the nozzle seat is deposited with Stellite. Excellent flatness and surface finish of the seating surfaces by precision machining and lapping assure safety valve to have high degree of seat tightness and long using life.
- The bellows of balanced bellows safety valves not only can avoid an effect of variable back pressure in the system, but also can protect spring and other trim components from corrosive media.
- The choice of materials is careful. The manufacture of the spring and the bellows has strict technological process. Each of them is tested and checked strictly

Technical data API Safety valves

Set pressure	0.2-400barg / 2-5,802psig
Temperature	-273-550° C/-450-1,000° F
Connections DIN EN 1952	DN25toDN200
Connections ASME B16.5	NPS1toNPS8
Body material	Carbonsteel,heat resistant Carbon steel, Stainless steel

Orifice Area cm ²	Inlet Flange Class	Type	Size (inch)	Connections		Maximum Set Pressure (MPa)							Back pressure limit 38°C		Material		Inlet Temp. Range (°C)
			Inlet×Orifice×Outlet			Inlet Temperature
