Note: (This function is invalid when the machine is not equipped with a purifier)
Long press for 5 seconds: Reset the network

Equipment Maintenance & Cleaning Advice

- Please keep the litter box door as clean as possible. Clean up dirt such as hair in time, and avoid the infrared sensor at the door or the door of the cabin.
- Please clean up the feces in time to avoid the waste collection box being full, resulting in the stop operation of the device.
- It is recommended to clean the waste collection box once every two weeks. After washing the waste collection box, you need to dry it before putting it in the device.
- We have used intelligent exhaust, negative ions, automatic cabin doors, and other technologies to maximize odor elimination, but it does not mean that the odor emitted by pet excrement can be completely removed, so you need to clean up the stools and the cleaning tube of the stools regularly, so as to ensure that you have a clean family environment.

Common Fault exclusion

- Power off the device and then connect to the power supply again. Theproduct will enter the self-inspection process
  During this period, please do not touch any buttons, and do not place anyobject above the litter box to patiently wait for the self-inspection programto complete.

- Perform a cleaning program, smoothing program, and sandclearance procedures to check whether they work normally.

- If the exhaust fan cannot work properly, please check whetherthe exhaust pipeline is inserted correctly.

- After inserting the exhaust pipe, you need to twist it clockwise to ensurethat the sensor in the exhaust pipe reaches the correct position. Thenmanually execute the "Odor Control" to check whether the fan works.

- When the device is carried out automatically smoothing, and clearing the sand, it is necessary to stay away from the device 1 meter or 3.2 feet.

Common problems

Q: Why does the litter box rotate automatically after power on? Why does the sensor cleaning light turn on without me making any settings?
A: Because the device runs a self-check program each time it is powered on after apower outage, the litter box returns to its initial position. This process takesapproximately 2 minutes.
After the self-check is complete, the device automaticallyenters the cleaning mode, and the sensor light turns on.
If you need to make othermode settings, you can adjust them manually.

Q: Why does the device take a long time to clean?
A: The device is designed with a special program that reduces the cleaning operation speed. This is done to lower the noise level of the device and save on cat litter usage. It takes approximately 2 minutes to complete a standard cleaning cycle.Additionally, the high curiosity of cats near the device, which interrupts the operation, can also contribute to extended cleaning time. The lower speed is beneficial for timid cats as it reduces resistance.

Q: Why does the device rotate during the cleaning process?
A: The "sand-saving rotation" and "dynamic waste collection" features are specifically designed in this product to save cat litter usage and increase the capacity of the waste collection bin. Therefore, during the cleaning process, there will be a reverse rotation and occasionally a small amount of waste may roll out of the waste collection bin. This is within the normal operation of the device, and after the cleaning is complete, all waste will be collected back into the waste collection bin.

Q: How should I choose the type of cat litter?
A: Common types of cat litter available on the market can be used.

Q: Why do I have clean cat litter when I clean up and pour it into the Waste Collection Box?
A: Please add cat litter according to the amount of cat litter in Litter Box; when adding too much cat litter, it will cause the cat litter to exceed the capacity of the Litter Box, and further pour the excess cat litter into the Waste Collection Box, causing cat litter waste Essence.

Q: Do I need to clean it with water? How long is it to clean it?
A: The Litter Box and Waste Collection Box can be removed and washed with water. It is recommended to clean it every 2 weeks to keep the indoor air environment clean, and it will also give you a clean and tidy toilet.

Warranty Service

If you encounter any problems during your use, please contact our customer service, we promptly provide you with support services.

Customer Service Email: Remac_support@Mideazy.com

1.The warranty period of this product is one year from the date indicated on the valid purchase certificate.

2.Within the one-year warranty period, if the fault is caused by the quality problem of this product during normal use by the user, our company will provide free warranty service.

3.The following situations are not covered by the warranty service:
(1) Incorrect installation, incorrect use, malici ous damage
(2) Unauthorized disassembly, repair, abnormal operation
(1) of the device or leakage of water.Faults cau sed by using other third-party accessories
(4) Poor usage environment
(5) Exceeding the promised warranty period
(6) Failure to provide valid purchase vouchers
(7) Faults caused by external events.

4.Communicate with the after-sales specialist in a timely manner to confirm whether you are entitled to free warranty services.

5.When returning the product, please fill out the product after-sales warranty form completely and send it along with the product.

Special reminder: For return and exchange services, please return the complete set of products, including the packaging box, main unit, all accessories, gifts (if any), etc.

Special Note

1.Place the spill-proof litter pad on the floor in front of the litter box outlet.

2.It is normal for a very small amount of litter to fall out of the outlet during use, so we have prepared litter mats for easy cleaning of the litter.

3.The cat litter box will trigger the anti-pinch function if the cat is near the exit when cleaning the running state, stop running, and will restart if the cat leaves the monitoring area. Please try not to let your cat near the exit when the litter box is running.

4.If your litter box comes with a fresh air unit, attach a hose to the unit to vent the odor outside.(Please purchase your own hose as your required.)
