Attention: Helena Jia

In accordance with your written instructions, H.P. White Laboratory, Inc. conducted Ballistic Resistance Testing of one armor plate sample received 12 December 2014 via DHL.

Testing was conducted in accordance with your instructions and the abbreviated provisions of NIJ-STD-0101.04, Level III, using 7.62x31mm, 147 grain, M80 ammunition. The test samples were mounted on an indoor range 50.0 feet from the muzzle of a test barrel to produce zero degree obliquity impacts. Velocity screens were positioned at 40.2 and 45.2 feet which, in conjunction with dual elapsed time counters (chronographs), were used to compute projectile velocities 42.7 feet from the muzzle. Table I presents a summary of the attached data records.

TABLE I. SUMMARY OF RESULTS

Test Sample			Ballistic Threat				Results	
Conditioning	Sample Number	Weight (lbs)	Caliber	Obliquity (degrees)	Shots	Velocity (ft/s) Max Min	Penetrations	Deformation (mm) (a)
Wet	S-3EL STA	3.61	7.62, M80	0	6	2783 2752	0	43/42

(a) Deformation of 5.5 inch thick clay backing; maximum permissible deformation: 44mm.

This report is based on data obtained from having tested only the sample submitted, and should NOT be interpreted as an endorsement by H.P. White Laboratory, Inc. of the continuing quality, or performance, of any other items of the same, or similar, design.

The test sample will be returned. Should you have any questions regarding this matter, or if we may be of any further service, please do not hesitate to contact us.
