308AB-3S1

Typical Properties

Epoxy Resin 308AB-3S1 is a flexible two-component epoxy system featuring moderate viscosity, excellent UV resistance, and self-debubbling properties. It delivers high clarity and cures to a soft, smooth finish at either room or elevated temperatures.

Applications

Epoxy Resin 308AB-3S1 is specifically formulated for surface encapsulation and transparent potting applications, including LED strip lighting, sticker encapsulation, flat-surface liquid casting, crystal accessory crafting, as well as the protective coating of signage, nameplates, badges, and electronic components.

Application Instructions

Working Conditions: Ensure the mixing container is clean. Measure Components A and B strictly by the designated weight ratio. After accurate weighing, stir the mixture thoroughly in a clockwise direction, scraping the inner walls of the container. Allow the mixture to rest for 3-5 minutes before application.

Precautions

- Dosage Control:** Prepare the adhesive quantity based on the pot life and application rate to avoid waste.
- Low-Temperature Handling:** When the ambient temperature falls below 15°C, preheat Component A to 30°C before mixing to facilitate easier application, as the viscosity increases in cold conditions.
- Storage After Use:** The container must be sealed immediately after use to prevent moisture absorption, which can render the product unusable.
- High-Humidity Curing:** At relative humidity levels above 85%, the cured surface is prone to absorbing moisture from the air, forming a whitish haze. Therefore, room

temperature curing is not recommended under these conditions; heat-assisted curing is advised.
