When cell charging is terminated improperly for reasons such as exceeding allowable charging time, cut-off due to exceeding charging voltage or cut-off due to exceeding charging current, all these events are defined as “improper charge termination”. Such event may indicate that there is current leaking within a cell system or some components have started to malfunction and subsequent charging of such cell systems without finding and fixing root cause of problem may cause potential overhear or fire hazards. When such event occurs, the BMS should lock itself up to prevent subsequent charging and notice should only be given to user after the system has been thoroughly checked by qualified technician who can identify and fix root cause attributed to the “improper charge termination”.

11) 客户应将电芯安全地固定在固体平面上，并将电源线安全地束缚在合适的位置、以避免摩擦而引起电弧和火花。

Products should be securely fixed to solid platform, and power cables should be securely attached by fastener to avoid intermittent contact which may cause arcing and sparks.

12) 严禁用塑料进行电气连接。不正确的电气连接方式可能会造成电芯使用过程中发生过热现象。
