| Timing chain kit | 68 |

Sneik engine unit

Product features:

- ◆ Gasoline engine: stable power with low noise, strong high-speed power but high fuel consumption and emissions, used for high-performance vehicles.
- ◆ Diesel engine: efficient and economical, low fuel consumption and high torque, suitable for heavy-duty long-distance travel, but with high noise and emissions.
- ◆ Electric engine: zero emissions, low noise, high efficiency, fast response, but range and charging are challenges, suitable for short distance urban use.
- ◆ Oil electric hybrid engine: combining fuel and electricity advantages, efficient and energy-saving, strong power, long range, suitable for multiple scenarios.

Sneik engine overhaul package

Product features:

- ♦ Engine overhaul package for special vehicles, saving time and worry.
- ♦ Good sealing, complete accessories, high precision and long life.
- ♦ Engine overhaul package to solve engine oil leakage problem.

Sneik automobile engine camshaft

Product features:

- ◆ Camshaft design needs to take into account the shape of the cam, the number of valves, materials, and transmission methods to meet the performance requirements of the engine, ensure precise valve control and durability, and improve combustion efficiency and power output.
- ◆ Camshafts are used in various engines to control the timing and stroke of valve opening and closing, directly affecting performance, fuel consumption, and emissions.
- ◆ Top mounted camshafts are the most widely used, and when combined with hydraulic lifters, they can eliminate the need for adjusting valve clearances. The transmission chain is short and has high stiffness, making it suitable for high-speed engines.

Sneik automobile engine valve cover

Product features:

- ◆ The valve cover is tightly connected to the cylinder head, forming a closed system to prevent gas and lubricating oil leakage and block dust.
- ◆ Its interface ensures oil circulation and crankcase ventilation, while the lower camshaft ensures valve operation.
- ◆ The sealing gasket adopts heat-resistant and oil resistant rubber to maintain sealing performance in high temperature and high pressure environments.

Sneik automotive engine bearing shell

Product features:

- ◆ The bearing shell is made of wear-resistant materials such as bronze and anti friction alloys, which have wear resistance, corrosion resistance, and self-lubricating properties.
- ◆ Its structure is divided into integral and sectional types, relying on oil film lubrication to reduce friction, adapting to high load and high temperature environments, and can disperse pressure and absorb vibration.
- ◆ Easy installation, low cost, and can effectively extend the lifespan of equipment.

Sneik engine cylinder head assembly

Product features:

- ◆ The cylinder head assembly is used to seal the cylinder, forming a closed combustion chamber to ensure compression and power generation.
- ◆ It is made of cast iron or aluminum alloy, with the latter having better thermal conductivity. The structure is divided into integral and monolithic types, requiring sufficient strength and stiffness to ensure sealing.
- ◆ The assembly includes components such as camshafts and valves, and its combustion chamber design directly affects the engine performance.

Sneik Hydraulic strut

Product features:

- ◆ Hydraulic tappets can automatically adjust valve clearance. A larger intake valve allows for the intake of more air and improves combustion efficiency; The smaller exhaust valve makes it relatively easy to discharge exhaust gas.
- ◆ The valve is pressed open by the cam and closed by the spring.
- ◆ The valve seat ring has sealing, durability, and thermal conductivity, and cooperates with the valve to form a sealing ring to ensure performance.

Sneik engine crankshaft

Product features:

- ◆ The crankshaft is usually made by forging medium carbon (alloy) steel such as 45 steel or 40Cr to meet its high rigidity, fatigue strength, and wear resistance requirements.
- ◆ Its structure mainly includes the main journal, connecting rod journal, crankshaft, and balance block, which can work stably under the bending and torsional alternating loads caused by periodic gas forces and inertial forces.
- ◆ The core function is to convert the reciprocating linear motion of the piston into rotational motion and output power.

Sneik Car engine piston

Product features:

- ◆ Piston engines are mainly composed of components such as crankshafts, connecting rods, pistons, cylinders, and casings. They have a simple structure, high reliability, and are easy to maintain.
- ◆ Its fuel economy is superior to jet engines, with low noise and light weight. Boosting technology can improve high-altitude performance and meet the needs of high-altitude flight.
- ◆ The engine needs to match the characteristics of the propeller and adopt a dry lubrication system.

Sneik Oil Control Valve

Product features:

- ◆ The oil control valve is responsible for regulating the oil pressure, especially during high-speed driving, to prevent excessive oil pressure, avoid component damage, and prevent oil leakage.
- ◆ The oil control valve consists of a valve body and an actuator, and is divided into single seat, double seat, and other series.
- ◆ The oil control valve is crucial for the normal operation of the vehicle, and any abnormalities require professional maintenance.

Sneik Hydraulic strut

Product features:

- ◆ Hydraulic tappets can automatically adjust valve clearance without manual adjustment, reducing valve wear and eliminating valve noise.
- ◆ Its structure is compact and relies on oil pressure for operation.
- ◆ At the beginning of startup, there may be a brief noise due to the lack of established oil pressure, which then forms rigidity under the action of oil pressure and maintains normal operation.

Sneik engine intake and exhaust valves

Product features:

- ◆ The intake valve is usually larger and more numerous than the exhaust valve, as the intake relies on vacuum suction. Increasing the intake valve can improve the intake volume and optimize combustion efficiency.
- ◆ The intake valve is located near the intake system and is responsible for sucking in air and fuel mixture.
- ◆ The exhaust valve is located at the end of the exhaust system, used to discharge the exhaust gas after combustion and assist in engine cooling.

Sneik automobile engine cylinder head

Product features:

- ◆ The cylinder head and cylinder block cooperate to seal the cylinder and form a combustion chamber, which needs to have sufficient strength and rigidity to withstand the load, and an internal cooling water jacket is installed to cool down.
- ◆ The cylinder head is equipped with valve seats, guide holes, and intake and exhaust passages. Gasoline engines have spark plug holes, while diesel engines have injector holes.
- ◆ Commonly used cast iron or aluminum alloy materials for manufacturing. The cooling methods are divided into integral, segmented, and monolithic.

Sneik expansion tank wiper tank and oil tank

Product features:

- ◆ The expansion kettle is made of plastic and located at a high position in the cooling system. It is used to store and compensate for the coolant, maintain pressure, and discharge gas to ensure stable operation of the system.
- ◆ The high-quality water spray kettle cover is made of ABS or TPU material, with good weather resistance. Different car models need to be matched in size. When adding, choose the right glass water to prevent freezing in winter.
- ◆ The engine oil pot needs to be turned off and cooled before opening; Professional guidance is required for the operation of the brake fluid reservoir; The hydraulic handbrake oil pot is lightweight and easy to dissipate heat, which is beneficial for modification and control.

Sneik water pump

Product features:

- ◆ Special aluminum material and fully automatic imported equipment gravity die casting ensure the compactness of the water pump housing. Eliminate process defects such as cracking, bubbles, and sand holes.
- ◆ According to different vehicle models and structures, OE materials and processes are referred to, and integrated spinning, segmented welding, powder metallurgy, cast steel parts, etc. are used to ensure good rotation accuracy and precise tolerance fit of the pulley.
- ◆ High quality PPS, die cast aluminum, cast iron, cold-rolled steel plate, copper alloy and other inert metals and materials. Ensure the corrosion resistance, oxidation resistance, and load resistance of the impeller.
- ◆ Water seal material selection includes OE grade waveform spring+graphite+silicon carbide, threaded spring+graphite+ceramic, etc. Ensure that the water seal has excellent wear resistance, corrosion resistance, long service life, and high sealing performance.

Timing tensioning wheel and idler gear

Product features:

- ◆ The tensioning wheel adopts SNEIK special tensioning wheel bearings, and the metal parts are made of imported steel. The optimized spring material makes the tensioning force more stable, the noise lower, and the wear resistance better.
- ◆ The idler wheel adopts SNEIK special bearings, and the special groove design offsets the pulling force between the bearing and the plastic wheel during operation, avoiding the plastic wheel from falling off. The steel ball has a larger diameter and can withstand greater loads.
- ◆ The hydraulic tensioner adopts special imported materials, with stronger automatic tensioning force, reduced friction, better wear resistance, and longer service life.

Attachment tensioning wheel and idler gear

Product features:

- ◆ The tensioning wheel adopts SNEIK special tensioning wheel bearings, and the metal parts are made of imported steel. The optimized spring material makes the tensioning force more stable, the noise lower, and the wear resistance better.
- ◆ The idler wheel adopts SNEIK special bearings, and the special groove design offsets the pulling force between the bearing and the plastic wheel during operation, avoiding the plastic wheel from falling off. The steel ball has a larger diameter and can withstand greater loads.
- ◆ The hydraulic tensioner adopts special imported materials, with stronger automatic tensioning force, reduced friction, better wear resistance, and longer service life.

Sneik timing belt kit

Product features:

- ◆ The timing belt is made of HNBR high saturated hydrogen rubber and wear-resistant polyester fiber, which is resistant to high temperature and aging. Patent tooth bottom canvas is resistant to tooth peeling, corrosion, and long-lasting.
- ◆ The tensioning wheel adopts SNEIK special tensioning wheel bearings, and the metal parts are made of imported steel. The optimized spring material makes the tensioning force more stable,
- ◆ The idler wheel adopts SNEIK special bearings, and the special groove design offsets the pulling force between the bearing and the plastic wheel during operation, avoiding the plastic wheel from falling off. The steel ball has a larger diameter and can withstand greater loads.
- ◆ The hydraulic tensioner adopts special imported materials, with stronger automatic tensioning force, reduced friction, better wear resistance, and longer service life.

Sneik timing chain kit

Product features:

- ◆ The timing chain is made of high-quality steel and needle roller bearings, and the chain pieces are extruded to reduce noise and wear, improving the fit and service life of the sprocket.
- ◆ The tensioner adopts imported steel parts, with stable elasticity and low noise; Special plastic can withstand high temperatures of 150 °C and is suitable for engine operating conditions.
- ◆ Timing guide rail has been optimized and verified through multiple tests. The product uses wear-resistant materials and high-precision technology to ensure low resistance and durability of the system, effectively reducing noise and saving fuel.
- ◆ The hydraulic chamber of the timing chain top is formed once to prevent leakage, and the high-quality material ensures a long-lasting and constant tension force.
